## DISCLAIMER

The information in this document has been funded wholly or in part by the U.S. Environmental Protection Agency (EPA) under Contract No. 68-03-3413, Work Assignment No. 2-52, to PEI Associates, Inc. It has been subjected to the Agency's peer and administrative review, and it has been approved for publication as an EPA document. Mention of trade names or commercial products does not constitute endorsement or recommendation for use.

## FOREWORD

Today's rapidly developing and changing technologies and industrial products and practices frequently carry with them the increased generation of materials that, if improperly dealt with, can threaten both public health and the environment. The U.S. Environmental Protection Agency (EPA) is charged by Congress with protecting the Nation's land, air, and water resources. Under a mandate of national environmental laws, the Agency strives to formulate and implement actions leading to a compatible balance between human activities and the ability of natural systems to support and nurture life. These laws direct the EPA to perform research to define our environmental problems, measure the impacts, and search for solutions.

The Risk Reduction Engineering Laboratory is responsible for planning, implementing, and managing research, development, and demonstration programs to provide an authoritative, defensible engineering basis in support of the policies, programs, and regulations of EPA with respect to drinking water, wastewater, pesticides, toxic substances, solid and hazardous wastes, and Superfund related activities. This publication is one of the products of that research and provides a vital communication link between the researcher and the user community.

The purpose of this Inventory is to present information on the availability of various treatability study types, the media and contaminants that could be investigated by each treatability study type, and for specific technologies, the demonstrated experience of responding firms at Superfund sites. The intended audience for this Inventory comprises Remedial Project Managers, responsible parties, contractors, and technology vendors.

E. Timothy Oppelt  
Director  
Risk Reduction Engineering Laboratory

## ABSTRACT

The Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) amendments mandate the use of permanent solutions to the maximum extent practicable when remediating Superfund sites. Fundamental to achieving this goal is the use of treatment technologies that reduce the intrinsic threats posed by hazardous wastes. Treatability studies are an important component of the remedy evaluation and selection process; these studies provide valuable site specific data necessary to aid in the selection and implementation of the remedy. Therefore, EPA has initiated a treatability study program to facilitate the performance of and improve the quality of treatability studies.

This document was developed to facilitate the performance of treatability studies by ensuring that requests for proposals (RFPs) for treatability studies are made available to the broadest subset of contractors who can perform such studies. This listing is not a pre-qualification of contractors, and all RFPs must be done in accordance with the Federal Acquisitions Regulations.

The information contained in this inventory has been organized into two volumes. Volume I provides listings of treatability study vendors organized by technology and contaminant groups. Volume II contains an alphabetical listing, by vendor name, of all of the information provided by the responding firms.

The intended users of the document are Superfund remedial project managers and contractors who are involved in a procurement process to obtain a treatability study.

## INTRODUCTION

The U.S. Environmental Protection Agency's Risk Reduction Engineering Laboratory of the Office of Research and Development, working on behalf of the Office of Emergency and Remedial Response, has undertaken a study to identify and publish sources of treatability study vendors. This effort is in support of the Superfund remedy selection and remediation process. On August 31, 1989, the U.S. Environmental Protection Agency published a notice in the Commerce Business Daily (CBD) inviting interested parties to submit information on capabilities to conduct treatability studies. The responses received on or about September 25, 1989, have been assembled in a dBase 3+ formatted data base and are presented herein.

The intended purpose of this document is to provide information about vendors that have capabilities for conducting treatability studies for Superfund wastes or hazardous substances. Once a specific treatment option(s) has been identified as having potential for use at a Superfund site, and a determination has been made that a treatability study is needed, a Request for Proposal (RFP) announcement should be mailed directly to all vendors that responded to the CBD notice and indicated capabilities for the specified treatment technology. The direct mailing is to be conducted in conjunction with the current RFP notification process to acquire treatability services. The inclusion of vendors' names in this Inventory does not constitute or imply prequalification of these vendors.

The data provided in this Inventory pertains to various treatability study types, the media and contaminants that could be investigated by each treatability study type, and for specific technologies, responding firms' demonstrated experience at Superfund sites. This information is organized in two volumes. Volume I contains the following tables:

- Table 1 - Summary List of Technology Process Options
- Table 2 - Listings of Vendor Information Organized Alphabetically by Treatment Technologies
- Table 3 - Summary List of Contaminant Groups
- Table 4 - Listings of Vendor Information Organized by Contaminant Groups
- Table 5 - Alphabetical List of Vendors with Address, Telephone Number and the Name of a Person to Contact

Volume II of this report contains an alphabetical listing, by vendor's name, of all of the information provided by responding firms.

The information contained in the responses to the August 31, 1989, notice has not been verified, and the inclusion of statements on the capabilities of specific firms in this document (Volumes I and II) does not constitute an endorsement by the U.S. Environmental Protection Agency or by PEI Associates, Inc., to conduct treatability studies. The purpose of this report is merely to identify and publish a list of firms interested in conducting treatability studies rather than to qualify these firms. EPA intends to update this list periodically. For further information, please contact:

AUGUST 31, 1989, COMMERCE BUSINESS DAILY NOTICE

The U.S. Environmental Protection Agency Office of Research and Development, working with the Office of Emergency and Remedial Response, is seeking to identify potential sources which possess the qualifications to perform specific types of treatability studies at Superfund sites. A listing of potential sources will be made available to Regions and to EPA contractors as a core source list which may be used for any future solicitations to acquire treatability study services. THIS NOTICE IS NOT AN ANNOUNCEMENT OF A SOLICITATION OPPORTUNITY. IT IS A REQUEST FOR INFORMATION REGARDING CAPABILITIES OF FIRMS WHICH MAY BE INTERESTED IN FUTURE EPA NEEDS FOR TREATABILITY STUDY SERVICES. This announcement will not result in prequalification of offerors.

BACKGROUND INFORMATION: The USEPA has a need, from time to time, to acquire treatability study services from qualified offerors in support of the Superfund remedy selection and implementation process. Such offerors may be needed on an expedited basis for subcontracting opportunities under existing contracts. They may also be needed for prime contracting opportunities. The Agency is seeking to develop a data base of potential offerors which possess qualifications for such services and which wish to receive solicitations and/or subcontracting requests as they arise. Potential offerors which submit information in response to this synopsis are not assured of automatically receiving all future solicitation/subcontract requests; however, the information they submit regarding qualifications will be made available to those Regions/EPA Contractors which anticipate the need for treatability study services. Any future EPA acquisition opportunities for treatability study services will be synopsized individually as they arise unless one or more of the conditions set forth in the Federal Acquisition Regulation (FAR) 5.202 exist.

REQUESTED INFORMATION: At this time, in accordance with FAR 5.205(a), interested parties are invited to submit information which will permit preliminary evaluation of their capabilities. The following types of information are requested:

Company Name  
Address  
Telephone Number  
Contact Name  
Company Type: U.S. Private Enterprise  
Large/Small Business  
Academic Institution  
Nonprofit Entity  
Federal, State, or Local Government Agency  
Foreign Government  
Foreign Firm  
(Other)

USEPA is interested in learning what types of treatability studies can be performed by treatability technology type. The following information is requested by each of the treatment technology types listed:

FOR TREATMENT OF LIQUIDS:

Thermal combustion	Ozonation
Wet air oxidation	Activated carbon
Activated sludge	Catalysis
Other aerobic biological treatment	Crystallization
Anaerobic biological treatment	Electrodialysis
Chemical oxidation	Liquid-liquid extraction
Precipitation	Reverse osmosis
Reduction	Solvent recovery
Chlorination	Stripping
Ion exchange	Adsorption
Neutralization	Other (specify)

FOR TREATMENT OF SOLIDS/SLUDGES:

Incineration	Stabilization/solidification
Wet air oxidation and vitrification	In situ vitrification
Chemical extraction	Biodegradation
Chemical treatment	composting
Soil washing	slurry-phase treatment
In situ soil flushing	solid-phase treatment
Low temperature thermal stripping	
In situ vacuum and steam extraction	
In situ biodegradation	
Other (specify)	

USEPA is interested in obtaining information on the capabilities of firms having Superfund site-specific and non-Superfund treatability study experience. The following information, by treatment technology, is requested:

EXPERIENCE:      Superfund site name  
                         Location  
                         Beginning and end dates of services performed  
                         Media and contaminants treated

FACILITIES UTILIZED AND SERVICES PERFORMED AT SUPERFUND SITES: Include such information as bench/pilot scale units; unit capacity; whether unit(s) were mobile or fixed; unit capacities and their location.

FACILITIES AND SERVICES AVAILABLE: Bench/pilot scale units  
   Unit capacity  
   Whether unit(s) are mobile or fixed  
   Fixed unit capacities and location  
   Any other relevant information

MEDIA AND CONTAMINANT CAPABILITY: Identify the media and contaminant groups for which your facility/staff has the capability to conduct treatability studies.

Media include:	Contaminant groups include:
Aqueous media	Halogenated volatiles
Organic liquors	Halogenated nonvolatiles
Soils	Nonhalogenated volatiles

Media include--contd.:

Sludges  
Sediments  
Other solids  
Other (specify)

Contaminant groups include--contd.:

Nonhalogenated nonvolatiles  
PCBs  
Pesticides  
Dioxins/furans  
Organic cyanides  
Organic corrosives  
Volatile metals  
Nonvolatile metals  
Asbestos  
Radioactive materials  
Inorganic corrosives  
Inorganic cyanides  
Oxidizers  
Reducers  
Other (specify)

Include any relevant experience not previously discussed.

PERMITTING STATUS: Designate those permits that you possessed for fixed base units used at Superfund sites. Indicate current status and limitations of permits you possess.

PERFORMANCE CAPACITY: Provide information on the number of specific types of treatability studies per month your facility/staff is capable of conducting.

Submit any price list that may be available to the general public.

SUBMISSION OF INFORMATION: Interested parties are requested to submit the types of information requested in this notice to the following address:

James S. Poles  
PEI Associates, Inc.  
Attn: Treatability Study Sources Sought  
1233 20th St., NW  
Suite 401  
Washington, DC 20036

SUBMISSION SCHEDULE: Submit all information by 25 September 1989.

Please note that throughout this document,  
the term "INP" indicates "Information Not Provided".
